

## **S.B. JAIN INSTITUTE OF TECHNOLOGY MANAGEMENT & RESEARCH, NAGPUR**

### **Practical 02**

**Aim:** To understand and demonstrate the use of basic commands in different operating systems (Windows, Linux, and UNIX) for managing files, directories, permissions, and user interactions through a terminal or command-line interface.

**Name:** Priyanshu Borkar

**USN:** CM2436

**Semester / Year:** 4<sup>th</sup>/2<sup>nd</sup>

**Academic Session:** 2025-26

**Date of Performance:** 20-01-26

**Date of Submission:** 27-01-26

❖ **Aim:** To understand and demonstrate the use of basic commands in different operating systems (Windows, Linux, and UNIX) for managing files, directories, permissions, and user interactions through a terminal or command-line interface.

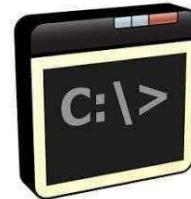

❖ **Objectives:**

1. To learn and practice fundamental command-line operations for file and directory management.
2. To explore and utilize user and permission management commands effectively.
3. To enhance system administration skills by working with commands across different operating systems.

❖ **Requirements:**

**Hardware Requirements:**

- **Processor:** Multi-core CPU, Intel Core i3 (3.0 GHz) or higher
- **RAM:** Minimum 4 GB (8 GB recommended for optimal performance)
- **Storage:** 100 GB HDD or SSD (Solid State Drive) for faster access
- **Network Interface:** Ethernet or Wi-Fi adapter for connectivity

**Software Requirements:**

- **Operating System:** Windows 10/11, Linux (Ubuntu 20.04/CentOS 8), UNIX-based OS
- **Command-line Interface:** PowerShell or Command Prompt (Windows), Terminal (Linux/UNIX)
- **Text Editor:** Nano, Vim, or Visual Studio Code for file editing
- **Administrative Privileges:** Superuser (Linux/UNIX) or Administrator (Windows) access

❖ **Theory:**

In system administration, command-line interfaces (CLI) are essential tools for managing and interacting with operating systems like Windows, Linux, and UNIX. Commands allow users to perform various tasks such as navigating directories, managing files, controlling permissions, and monitoring system performance. Each operating system provides a set of built-in commands, such as 'man', 'ls', 'cd', 'mkdir', and 'chmod', to facilitate efficient system management. Understanding these commands and their syntax is crucial for automating tasks, enhancing security, and ensuring optimal system functionality. This practical aims to develop foundational skills in executing and applying basic commands across different platforms.

❖ **Commands:**

**1. Display User Manual of a Command**

- Functionality: Shows the manual page with details about a command's usage, options, and arguments.
- Syntax: man <command>
- Example: man ls

**2. Change Current Working Directory.**

- Functionality: Changes the terminal's current working directory.
- Syntax: cd <directory-path>
- Example: cd /home/user/Documents.

**3. List Contents of the Current Directory.**

- Functionality: Lists all files and directories in the current location.
- Syntax: ls
- Example: ls

**4. Read/Modify/Concatenate Text Files.**

- Functionality: Displays or manipulates file content.
- Syntax:
  - Read: cat <filename>
  - Modify: ‘nano <filename>
  - Concatenate: cat <file1> <file2> > <outputfile>

**5. Create a New Directory.**

- Functionality: Creates a new directory at the specified path.
- Syntax: mkdir <directory-name>
- Example: mkdir newdir

**6. Display Current Working Directory.**

- Functionality: Prints the current directory path.
- Syntax: pwd
- Example: pwd

**7. Write Arguments to Standard Output.**

- Functionality: Prints the provided string or variables.
- Syntax: echo <arguments>
- Example: echo Hello World

**8. Remove a File.**

- Functionality: Deletes a specified file.
- Syntax: rm <filename>
- Example: rm file.txt

**9. Delete a Directory.**

- Functionality: Removes an empty directory.
- Syntax: rmdir <directory-name>
- Example: rmdir olddir

**10. Copy a File or Directory.**

- Functionality: Copies a file or directory to a destination.
- Syntax: cp <source> <destination>
- Example: cp file.txt backup/

**11. Switch to Root User.**

- Functionality: Gains root privileges temporarily.
- Syntax: sudo su
- Example: sudo s

**12. Move Files or Directories.**

- Functionality: Moves or renames files and directories.
- Syntax: mv <source> <destination>
- Example: mv file.txt newdir/

**13. Search for a String in a File.**

- Functionality: Searches for a specific word or pattern in a file.
- Syntax: grep "<string>" <file>
- Example: grep "error" log.txt

**14. Print Top N Lines of a File.**

- Functionality: Displays the first N lines of a file.
- Syntax: head -n <N> <file>
- Example: 'head -n 10 file.txt'

**15. Print Last N Lines of a File.**

- Functionality: Displays the last N lines of a file.
- Syntax: tail -n <N> <file>
- Example: 'tail -n 10 file.txt'

**16. Remove Read Permission from Owner.**

- Functionality: Revokes the owner's read permission for a file.
- Syntax: chmod u-r <filename>
- Example: chmod u-r file.txt

**17. Change Specific Permissions.**

- Functionality: Sets or removes specific file permissions.
- Syntax: chmod u+r,w-x,g+w <filename>
- Example: chmod u+r,w-x,g+w file.txt

**18. Add Write Permission to Owner, None to Others.**

- Functionality: Allows write access for the owner only.
- Syntax: chmod u+w,o-rwx <filename>
- Example: chmod u+w,o-rwx file.txt

**19. Assign Permissions to Users.**

- Functionality: Modifies file access for users, groups, and others.
- Syntax: chmod u+wx,g+rx,o+r <filename>
- Example: 'chmod u+wx,g+rx,o+r file.txt'

**20. Assign R/W/X to Others.**

- Functionality: Gives read, write, and execute permissions to others.
- Syntax: chmod o+rwx <filename>
- Example: chmod o+rwx file.txt

**21. Remove All Permissions from All Users.**

- Functionality: Clears all permissions on a file.
- Syntax: 'chmod a-rwx <filename>
- Example: 'chmod a-rwx file.txt'

**22. Remove Read Permission Using Absolute Mode.**

- Functionality: Uses numeric mode to restrict read access.
- Syntax: chmod 700 <filename>
- Example: chmod 700 file.txt

**23. Set R/W for Owner, None for Group/Other.**

- Functionality: Assigns permissions in numeric mode.
- Syntax: chmod 600 <filename>
- Example: chmod 600 file.txt'

**24. Add Execute for Owner, Read for Group/Others.**

- Functionality: Adds execution and read access.
- Syntax: chmod u+x,g+r,o+r <filename>

- Example: chmod u+x,g+r,o+r file.txt

## 25. Add Execute Permission to All Users.

- Functionality: Enables execution by everyone.
- Syntax: chmod a+x <filename>
- Example: chmod a+x script.sh

Output:

The image shows a dual-monitor setup with two terminal windows running on a blue-themed desktop environment. Both monitors display the same terminal session, which is a standard Linux terminal window with a black background and white text. The terminal shows the user 'priyanshu' at the prompt, executing various commands related to file permissions. The top monitor shows the initial steps of creating a directory and changing into it, then echoing 'Hello World' into a file named 'file.txt'. The bottom monitor shows the user attempting to run this file with 'chmod a+x file.txt' and then execute it with './file.txt', demonstrating that the file is now executable by everyone. The desktop interface includes a taskbar with icons for various applications like a browser, file manager, and system tools.

```
priyanshu@DESKTOP-6EGFAD1:~$ To run a command as administrator (user "root"), use "sudo <command>". See "man sudo_root" for details.
priyanshu@DESKTOP-6EGFAD1:~$ mkdir priyanshu
priyanshu@DESKTOP-6EGFAD1:~$ pwd
/home/priyanshu
priyanshu@DESKTOP-6EGFAD1:~$ echo Hello World
Hello World
priyanshu@DESKTOP-6EGFAD1:~$ 

priyanshu@DESKTOP-6EGFAD1:~$ To run a command as administrator (user "root"), use "sudo <command>". See "man sudo_root" for details.
priyanshu@DESKTOP-6EGFAD1:~$ mkdir priyanshu
priyanshu@DESKTOP-6EGFAD1:~$ pwd
/home/priyanshu
priyanshu@DESKTOP-6EGFAD1:~$ echo Hello World
Hello World
priyanshu@DESKTOP-6EGFAD1:~$ Hello World
Hello World
priyanshu@DESKTOP-6EGFAD1:~$ echo Hello World
Hello World
priyanshu@DESKTOP-6EGFAD1:~$ man ls
priyanshu@DESKTOP-6EGFAD1:~$ man ls
priyanshu@DESKTOP-6EGFAD1:~$ man ls
priyanshu@DESKTOP-6EGFAD1:~$ man ls
priyanshu@DESKTOP-6EGFAD1:~$ ls
file.txt linux_lab priyanshu
priyanshu@DESKTOP-6EGFAD1:~$ cd
priyanshu@DESKTOP-6EGFAD1:~$ cd /home/priyanshu/Desktop/Priyanshu
priyanshu@DESKTOP-6EGFAD1:~$ ls
file.txt linux_lab priyanshu
priyanshu@DESKTOP-6EGFAD1:~$ cat file.txt
priyanshu@DESKTOP-6EGFAD1:~$ cat file.txt
file.txt linux_lab priyanshu
priyanshu@DESKTOP-6EGFAD1:~$ rm file.txt
priyanshu@DESKTOP-6EGFAD1:~$ rmdir olddir
rmdir: failed to remove "olddir": No such file or directory
priyanshu@DESKTOP-6EGFAD1:~$ 
```

❖ **Conclusion:** In conclusion, understanding and using essential operating system commands like ‘ls’, ‘cd’, ‘cp’, ‘mv’, and ‘chmod’ enables efficient file management, navigation, and permission control. Tools like ‘grep’, ‘head’, and ‘tail’ enhance data processing. Mastery of these commands improves system administration, task automation, and overall system security and performance.

❖ **Discussion Questions:**

1. **What is the significance of the pwd command in a Linux environment?**
2. **Explain the function of the cp command and its common options.**
3. **How does chmod 700 affect file permissions, and what does each digit represent?**
4. **Describe the difference between head and tail commands in Linux.**
5. **What is the purpose of the grep command, and how is it used with regular expressions?**
